```

SAVE VIEW:

STEP1: Go to that query and click on SAVE button then from Menu select Save view

The screenshot shows the Google Cloud GCP Workshop interface. In the top navigation bar, there is a search bar and a 'GCP Workshop' button. Below the navigation bar, the 'Explorer' panel on the left shows a tree view of resources, including 'Queries', 'Notebooks', 'Data canvases', 'Data preparations', 'Workflows', 'External connections', and 'Bike_Store'. The 'Bike_Store' folder is expanded, showing 'customer', 'order', and 'student_data'. The main panel displays an 'Untitled query' with a SQL query:

```
1 SELECT
2   c.first_name,
3   c.last_name,
4   c.phone,
5   c.email,
6   c.street,
7   c.city,
8   c.state,
9   c.zip_code,
10  FROM customer c
```

 The 'SAVE' button is highlighted in the top bar. A dropdown menu is open, showing options: 'Save query', 'Save query (Classic)', 'Save view' (highlighted with a red box), and 'Save as...'. Below the query, the 'Query results' section shows a table with columns: 'first_name', 'last_name', 'phone', 'email', 'street', and 'city'. The table contains two rows of data. The 'Job history' section at the bottom shows a table with columns: 'Job ID', 'Creation time', 'Owner', 'Type', 'Summary', 'Insights', 'Session ID', and 'Actions'.

STEP2: Select Data Set then give name to Table I have given customers_order and click on SAVE. View is saved.

The screenshot shows the 'Save view' dialog box. The dialog box has a title bar 'Save view' and a message: 'The destination dataset for a saved view must be in the same region as the source, otherwise a "Dataset not found" error will be returned.' Below the message, there are three input fields: 'Project *' with the value 'esoteric-parsec-448206-a0', 'Dataset *' with the value 'Bike_Store', and 'Table *' with the value 'customers_order'. The 'Table *' field is highlighted with a red box. Below the input fields, there is a note: 'Maximum name size is 1,024 UTF-8 bytes. Unicode letters, marks, numbers, connectors, dashes, and spaces are allowed. The job will create the specified destination table if needed.' At the bottom right of the dialog box, there are two buttons: 'SAVE' (highlighted with a red box) and 'CANCEL'.

EXPORT RESULT

Go to that customers_order table select EXPORT and from the menu choose a suitable option. I choose Explore with Sheets. Data will be Exported on GSHEET.

The screenshot shows the Google Cloud BigQuery interface. On the left, the Explorer pane shows the 'customers_order' table selected under the 'Bike_Store' dataset. The main panel displays the 'customers_order' table schema with columns: first_name, last_name, phone, email, street, city, and state. The 'EXPORT' button is highlighted with a red box, and its dropdown menu is open, showing options: 'Explore with Sheets', 'Explore with Looker Studio', and 'Scan with Sensitive Data Protection'. The 'Job history' section at the bottom shows a recent query job.
